

H2O Engineering, Inc. does not only pride itself on the equipment that it manufactures, but equally on the services that we provide in support of our products and our clients' objectives. From assisting in preliminary development of project strategies and custom design concepts, to equipment O&M and data collection, and all the way through to project completion, we provide invaluable resources that promote goal achievement. H2O understands that even with our standard products, the equipment sale itself is merely the beginning of our project relationship with clients. We nurture our client associations in an effort to gain an ongoing mutual trust, which facilitates efficient communication, promotes design innovation, and ensures site performance.

## SERVICES OFFERED

### **Project Strategy**

H2O has extensive experience in analyzing site maps and other pertinent data that can assist in the project planning stages. We can offer expertise in well installation design, sparge sequence configuration, efficiency evaluations, and project scope alterations.

### **Custom System Design**

At H2O we have become very adept in applying new perspectives to traditional strategies. Whether dealing with remediation projects or water treatment, often times we find that standardized equipment will not suit the project needs. We are able to create cutting edge customizations including automation & control solutions, equipment packaging, and remote equipment monitoring & operation.

### **Electrical System Design**

As UL 508A listed panel shop, H2O delivers top quality electrical design and equipment. From equipment specifications to full drawing packages which can include electrical line diagrams, layout diagrams, and P&ID's, we offer our clients a sound resource for their electrical needs.

### **Equipment Rentals and Leases**

The H2O Rental Fleet consists of various types and sizes of stationary or mobile treatment equipment, analyzers, and meters. This equipment is available for both short term rentals and long term leases. Additionally, these field proven units are offered for sale at times, subject to availability.

# Services and Support

In addition to our commitment to our clients, H2O is also dedicated to Health and Safety. Our Service and Sales technicians are all extensively trained in CPR/First Aid and 40hr HAZWOPER. These efforts enable us to provide industry leading, hands on support, regardless of varying site environments. It also qualifies our technicians to adhere to specific, often stringent, site requirements. H2O Engineering, Inc. is a California licensed General Contractor # 790167.

## CUSTOMER SUPPORT

### Onsite System Optimization

In many cases, especially with older systems, we find that there is room for improvement when it comes to efficiency and productivity. H2O provides water analyses, automation audits, ozone output verification, and power consumption analyses in order to identify potential system improvements.

### Operation & Maintenance

On/Offsite training by H2O offers a full understanding of our products from a technical standpoint. It also helps qualify your technicians to troubleshoot the equipment that they are operating. We also provide our own start up, operation, and routine maintenance through comprehensive service contracts. In addition, H2O is capable of operation, maintenance, and repair of all brands of water treatment related equipment.

### Equipment Specification Support

Sometimes projects have site specific needs that directly affect or even limit the application conditions of a project. H2O offers flexibility to our clients in addressing these variable influences. Understanding power requirements, materials compatibility, project priorities, system sizing and budgetary limitations assist in realizing project objectives.

### Free Lifetime Tech Support

During normal business hours, H2O provides technical phone support for all of its products. This offer is not limited by product warranties and is a free service. Our availability to interface with site technicians and programmers ensures that projects go smoothly and any difficulties are remedied promptly.
